<b>Time taken</b>	20 mins 8 secs
<b>Marks</b>	1.00/1.00
<b>Grade</b>	<b>10.00</b> out of 10.00 ( <b>100%</b> )

**Question 1** | Correct   Mark 1.00 out of 1.00   [Flag question](#)

Convert the following algorithm into a program and find its time complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i>= 1;i=i/2)
```

```

    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}

```

**Note:** No need of counter increment for declarations and scanf() and count variable printf() statements.

**Input:**

A positive Integer n

**Output:**

Print the value of the counter variable

**Answer:**

```

1  #include <stdio.h>
2  int count=0;
3  int main(){
4      int n;
5      scanf("%d",&n);
6      int c=0;
7      count++;
8      count++;
9      for(int i=n/2;i<n;i++){
10         count++;
11         for(int j=1;j<n;j=2*j){
12             count++;
13             for(int k=1;k<n;k=k*2){
14                 count++;
15                 c++;
16                 count++;
17             }
18             count++;
19         }
20         count++;
21     }
22     printf("%d",count);
23 }

```

	Input	Expected	Got	
✓	4	30	30	✓
✓	10	212	212	✓

Passed all tests! ✓

**Correct**

Marks for this submission: 1.00/1.00.
